

Windward Community College Achieving the Dream Information

Introduction

The information presented in this report is based upon the Achieving the Dream files submitted to the Achieving the Dream project datateam in September 2007. The processing date of the information for this report is January 5, 2008.

The information was extracted from the Achieving the Dream database through the use of SQL scripts developed by members of the UHCC IR Cadre most notably by Guy Nishimoto (LCC), Steve Shigemoto (HCC) and Nalani Quinn (WCC).

The information regarding enrollment, persistence, certificates or degrees obtained, success in sequential courses and transfers is presented for all students, non-Hawaiian students and Hawaiian students. Information detailing Hawaiian student enrollments is a major emphasis of the College. The information is presented by cohorts so that tracking of students over time can be reviewed.

Completion (or Transfer) by Cohort shows

The number of students in a cohort who are either not of Hawaiian ancestry or of Hawaiian ancestry

The number of students who earned a degree or certificate or who transfer to another college

Then computes the percentages of those who earned a degree or certificate or who transferred.

The counts are UNDUPLICATED.

A person is counted only once, no matter how many times he/she enrolled.

A person is counted only once for completion. If someone received two or three degrees or certificates, he/she is counted only ONCE as a completer.

There may be differences between the total semester by semester counts of students completing or transferring and Completion (or Transfer) by Cohort counts. Those differences arise because the semester by semester counts ARE NOT UNDUPLICATED. If a student completes a certificate in a Fall term, then a certificate in a Spring term, that student will be counted twice--once each in the semester he/she received the degree and certificate.

Similarly if a student transfers in one term, returns to the college in another term, and transfers in a third term. Two transfers will be counted, each in the appropriate term.

The tables above contain the number and percentages for students recommended to ENG 22. PlcdE22 is the number of students who placed in English 22

EnrE22, PcntEnr, PssE22, PcntPass show the number and percentages of students who enroll in and pass ENG22 out of all who placed in ENG22

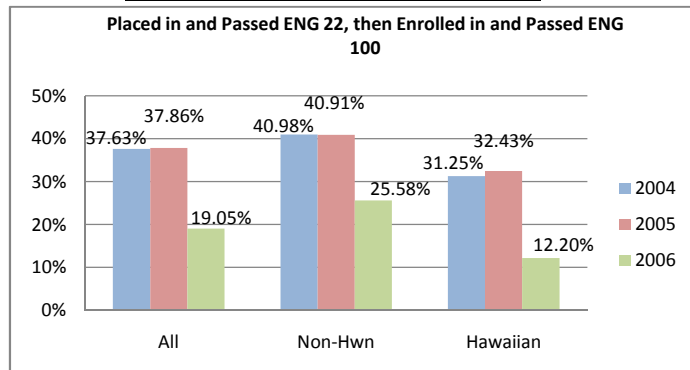

TkE100, PcntTk, PssE100, PcntPass show the number and percentages of students who enroll in and pass ENG100 out of all who placed in ENG22

*=This percentage is the (number of those who have taken 100) divided by (number who passed E22). It is over 100% in some cases because not all students who are placed in E22 enroll in E22.

A YldPcnt (Yield Percentage) is the percentage of students who took and passed ENG 22 out of all those who had been recommended to ENG 22 and actually took 22.

The above shows the number of students in a cohort who attempted a class, the number of students who passed that class (got a C or better or a Pass or Credit grade), and then computes the percentages of those who passed.

These figures are not unduplicated. If a student attempted to take the class in a Fall term, then again in a Spring term, yet again in the next Fall, that student will be counted three times--once in each semester he/she enrolled. If the student passed the class in one semester, retook the class in another semester (perhaps to improve the grade), both the initial passing and the second passing grade will be counted, each in the semester the person took and passed the class.

The above shows the number of students in a cohort who attempted a class, the number of students who passed that class (got a C or better or a Pass or Credit grade), and then computes the percentages of those who passed.

Unlike the "English 100 Completion by semester" tables, these counts are UNDUPLICATED. If a person attempted to take a class three times, that person will be counted ONCE as having attempted the course. If someone took a class twice and got two passing grades, only the higher grade will be counted.

Differences arise from the "English 100 Completion by Semester" tables because the this count includes ALL terms including Summer. The semester by semester counts show only the Fall and Spring terms.

The tables above contain the number and percentages for students recommended to Math 25. PlcdM25 is the number of students who placed in Math 25. EnrM25, PcntEnr, PssM25, PcntPass show the number and percentages of students who enroll in and pass Math 25 out of all who placed in Math 25. TkM103, PcntTk, PssM103, PcntPass show the number and percentages of students who enroll in and pass Math 103 out of all who placed in Math 25. * = This percentage is the (number of those who have taken 103) divided by (number who passed 25).

A YldPcnt (Yield Percentage) is the percentage of students who took and passed Math 103 out of all those who had been recommended to Math 25 and actually took 25.

The above shows the number of students in a cohort who attempted a class, the number of students who passed that class (got a C or better or a Pass or Credit grade), and then computes the percentages of those who passed.

These figures are not unduplicated. If a student attempted to take the class in a Fall term, then again in a Spring term, yet again in the next Fall, that student will be counted three times--once in each semester he/she enrolled.

If the student passed the class in one semester, retook the class in another semester (perhaps to improve the grade), both the initial passing and the second passing grade will be counted, each in the semester the person took and passed the class.

The above shows the number of students in a cohort who attempted a class, the number of students who passed that class (got a C or better or a Pass or Credit grade), and then computes the percentages of those who passed.

Unlike the "Math 103 Completion by semester" tables, these counts are UNDUPLICATED. If a person attempted to take a class three times, that person will be counted ONCE as having attempted the course. If someone took a class twice and got two passing grades, only the higher grade will be counted.

Differences arise from the "Math 103 Completion by Semester" tables because the this count includes ALL terms including Summer. The semester by semester counts show only the Fall and Spring terms.
